

Find a mic. Get on the list.

Music, comedy, and poetry open mics on one map, with the signup list built right in. Free for everyone, with nothing locked behind a purchase.

- Every discipline is first class: the only app that maps all three scenes together.
- Listings show when the host last confirmed them, so stale mics cannot hide.
- From "what is on tonight" to "I am on the list" without leaving the app.
- One account plays both sides: perform on Tuesday, host on Wednesday.

What is in the app

Everything below is built, working, and free today.

DISCOVER

Three scenes, one map

Music, comedy, and poetry nights together in one place for the first time. Filter by what you perform, which day, cost, distance in miles, and how you get on stage. Search any city, or look around right where you are standing.

Know it still runs

Every listing shows when its host last confirmed the details: green for fresh, amber for aging, gray for unconfirmed. No more driving across town for a mic that quietly died last spring.

Every detail up front

The schedule in plain words, the price, the set length, how many spots are left tonight, and who is featuring. Age rules, sound system, parking, and one-tap directions are on the page before you commit your evening.

Opens where you live

The app starts on your home neighborhood and pre-selects the kinds of mics you perform at. Your address stays private: it is never shown to other people, anywhere.

GET ON STAGE

Two taps to the list

Sign up for a night straight from its listing, with a live count of the spots left. Walk-in lists confirm you instantly; name-draw nights enter you in the drawing. The button always tells you when signups open.

Watch the night unfold

Your slot number updates live as the list moves. Your phone buzzes the moment you are drawn, promoted from the waitlist, or up next. No more crowding the clipboard to see where you stand.

Every yes in one place

The Going tab collects every night you said yes to, soonest first: your slot, your draw entries, and your plans. On walk-in nights, tapping "I am going" also tells the host how many people to expect.

Never miss your night

Star a mic and get reminded on the day it happens. Add any night to your calendar in one tap. Turn on nearby alerts and hear about new mics the week they start up.

RUN THE NIGHT

List your mic in minutes

Describe your night the way you would say it out loud: every Tuesday at 8. Add the venue, the cost, a poster, and bill a featured artist for any night. Someone already listed it? Claim it and take the keys.

Freshness in one tap

A single tap confirms your listing is still accurate and shows performers a green badge. Cancel one night with a reason people actually see, or edit one night versus every future night; the app asks which you mean.

Run it live

Before doors: watch signups arrive, draw the lottery in the open, add walk-ins by name. During the show, Live mode is two numbers and one big button: who is on stage, a silent set timer that taps your hand at time, and who is up next.

Know your room

Signups and turnout for every past night, so you can see which weeks pack the room. Like everything else in the app, analytics are free: there is no paid tier and nothing to unlock.

TRUST, BUILT IN

A scene you can trust

Report or block from any listing or list, and blocks are enforced everywhere, not just hidden. A moderation queue reviews everything within a day. Saw a wrong time or a dead mic? Flag it in two taps.

Your data, your call

Location is only used when you ask to search near yourself. Listings stay readable offline for one-bar parking lots. Deleting your account takes two taps in settings and actually deletes it.

Running a mic, start to stage

■ Handoff: performers see or feel this moment ■ Handoff: created by a performer's action

1 Create an account and switch on the Producer role.

Keep the Performer role too. One account covers both, because most hosts also perform.

2 Add your mic, or claim it if someone beat you to it.

Pick the venue on a map, set the schedule in plain words, choose how performers get on stage, add cost, set length, and a featured artist when you have one. Claiming asks how we can verify you run the night.

Handoff The moment the listing is live, it appears on every nearby performer's map and list with your schedule and signup rules.

Watch for: claims wait on a human review before control transfers, so a claimed mic is not yours the same minute you ask.

3 Tap Confirm accurate whenever the details still hold.

One tap, stamped by the server so it cannot be faked or backdated.

Handoff Performers see "Confirmed 2 days ago" in green on your listing before they decide to come.

4 Watch the night fill up before doors.

Signups arrive with a live count of spots taken, and "I am going" plans tell you how many walk-ins to expect.

Handoff Every count is a performer who tapped "Sign me up" or "I am going" on your listing.

5 Open the list and set the running order.

Draw the lottery with a visible shuffle, add walk-ins by name, reorder the lineup, promote from the waitlist. The draw locks once the show starts, so the order people were told is the order that holds.

6 Go live and run the show from one screen.

Live mode shows who is on stage, a silent set timer that taps your hand when time is up, and one button to bring up the next performer. Marking a set done is what moves the night forward, so a handoff mid-show costs nothing.

Handoff Tapping "Up next" buzzes that performer's phone: "You are on deck," wherever they are in the room.

7 Mark no-shows, end the show, or cancel a night when life happens.

Cancelling asks for a note, and the night can be restored if plans change back.

Handoff Everyone signed up gets the cancellation and your reason immediately, on the listing and by push.

8 Check turnout in analytics, then do it again next week.

Signups and turnout per night, free like everything else in the app.

From couch to stage

 Handoff: your action lands on the host's screen  Handoff: created by the host's action

1 Open the app and just browse. No account needed.

Every mic near you is visible immediately: map, list, search, and full listing details.

2 Make an account when you are ready to get on a list.

Pick Performer, choose what you perform, and set your home area. That area stays private; it only aims the map.

3 See what is on tonight, near you, in your discipline.

Discover opens on your neighborhood with your disciplines pre-selected. Today and Weekend narrow it to nights you can actually make.

4 Open a listing and size up the night before you go.

Plain-words schedule, cost, set length, spots left, who is featuring, age rules, parking, directions, and how the list works.

Handoff The freshness badge you are trusting is the host's one-tap confirmation, timestamped by the server.

5 Tap "Sign me up," or "I am going" for walk-in nights.

Walk-in lists hand you a slot number on the spot. Name-draw nights put you in the drawing. Just planning to show up? Saying you are going still counts you in.

Handoff Your name lands on the host's list the second you tap, and your "I am going" joins their expected headcount.

Watch for: "Invite only" mics have no in-app signup by design; the listing points you to the host or venue instead. Paid nights are settled at the venue, never in the app.

6 Watch your status change in real time.

Handoff Drawn in the lottery, promoted off the waitlist, or up next: each is the host acting on their screen, and each one buzzes your phone.

7 Check the Going tab on the day.

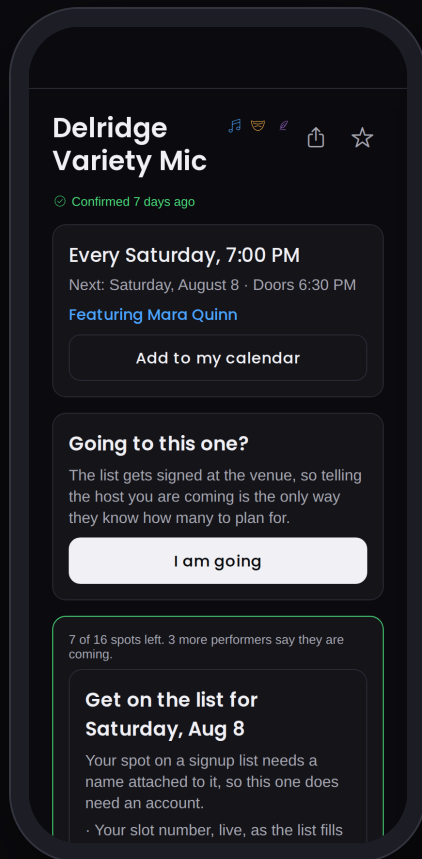

Every night you said yes to, soonest first, with your slot number and any cancellation before you head out. Favorites remind you on the day, and any night drops into your calendar in one tap.

8 Build your history.

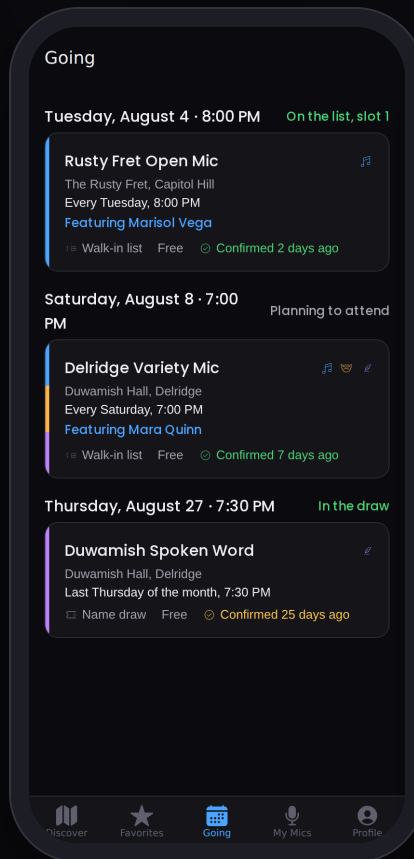

Every night you play stays on your profile, next to your photo and links. Your scene resume writes itself.

The app at night

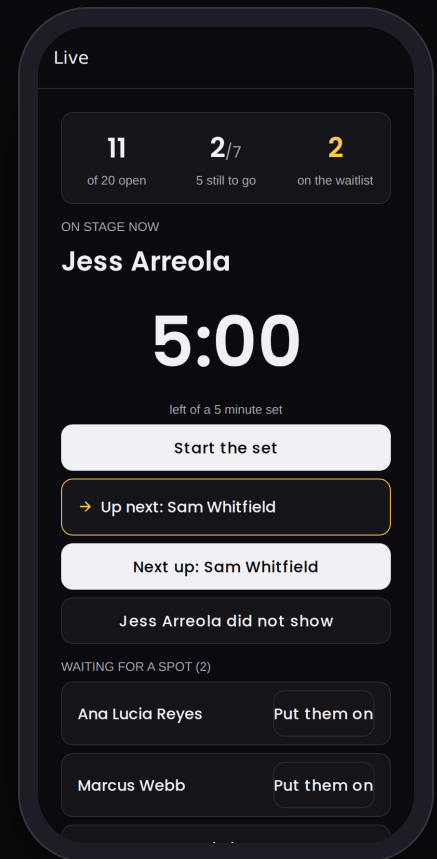

Dark by design: built for dim rooms, late sets, and one thumb.

A listing, sized up in seconds
Freshness, featured artist, spots left

Every yes in one place
Slots, draw entries, and plans

Live mode, mid-show
On stage now, silent timer, up next

COMING SOON

In progress and not yet live. Everything above this line ships in the current build.

Sign in with Apple and Google

The buttons are built and waiting on store credentials. Email sign-in works today.

Public launch

TestFlight and Play internal testing, then the App Store and Google Play.

Cities beyond Seattle

Seattle is the first Open Mic Explorer city. New scenes get seeded next, and any producer can list a mic anywhere today.
